Green Streets Fidler Court

Tree removal and retention plan

Remove*

Removal to be determined**

*Where trees are identified as having a short useful life expectancy or will not grow to a size which provides adequate shade and cooling effects, they are considered as low value trees. To achieve the canopy cover target, set out in the Urban Forest Strategy, replacing low value trees with larger, healthy trees is necessary to increase our urban forest and cool our streets.

** Factors that determine whether or not a tree will be removed include the species and future size of tree, the health of the tree and feedback collected throughout the consultation.
